

WE LOVE WHAT WE DO

# CARE CONNECTION

A PUBLICATION FOR CLIENTS OF BAYADA AND FAMILY MEMBERS

BAYADA Clinical Manager Pam Compagnola, RN

### A Message from BAYADA CEO David Baiada

As we all continue to navigate the challenges of the **COVID-19 pandemic**, the spotlight has shifted to another crippling disease with longstanding and pervasive roots in our society: racism.

I feel a deep sadness, frustration, and anger as I grapple with the news of the senseless killing of Black Americans. And I feel isolated and disconnected from others in our BAYADA community as we try to navigate the pain, fear, and frustration felt by communities and people of color within BAYADA and across the country.

Our BAYADA community of compassionate caregivers—comprised of many different races, ethnicities, abilities, sexual orientations, genders, and ages—stand together vigilant and united against racism and discrimination. The BAYADA Way has always guided us and continues to serve as a reminder that working with a spirit of universal faith, hope, and love is as important as ever, and extends to everyone in our society.

You have my pledge that BAYADA will continue to uphold and promote equality for all we serve, and to all those who serve you. You can read my full message, Standing Together with Love and Compassion, at https://bit.ly/bayada-ceo.

With gratitude for the trust you place in us,

### **David Baiada**

CEO, BAYADA Home Health Care

# **Emergency Preparedness for People with Home Health Care Needs**

Hurricanes. Flash floods. Power outages. There are some storms you see coming; other urgent situations may strike without warning. Emergency planning ahead of time is important for everyone, but even more critical for someone with special medical needs. There are additional factors to consider and steps to take to help keep you and your loved ones safe in any event. This checklist can help you prepare for an emergency or natural disaster.

For a 15-minute discussion of real-life experiences and emergency planning for people with home health care needs, listen to this episode of BAYADA's podcast, Healing on the Home Front at https://bit.ly/HealingHomeFront.

### Make an emergency plan of action

- Discuss your emergency plan for a disaster with your physician. How will you be able to communicate with your physician's office if needed?
- Decide with your family if you are staying in town or evacuating.
   Where are the safe places to shelter? What about your pets?
- Make sure your neighbors are aware that you or a loved one has special health care needs.
- Make a plan to communicate with your clinicians, caregivers, loved ones, and neighbors.
- Discuss an emergency plan with your home health care company if you cannot leave your neighborhood or your health care professionals cannot reach you to provide care and support.

### **Emergency preparedness checklist**

- Notify your local emergency management team so they are aware that you or a loved one has special needs.
- If someone in your home relies on electrical medical equipment, ask your utility provider to list you as a "life-sustaining equipment customer."
- Prepare backup power, light, and cooling options in case of a power outage, such as a dedicated generator for medical equipment, whole-home generator, rechargeable marine battery, batteries, flashlights, lanterns, or fans. Carefully follow all safety instructions.
- Ensure that smoke alarms and carbon monoxide (CO) detectors are working and have fresh batteries, and always have a multipurpose, dry-chemical fire extinguisher on hand.
- Stock at least a 3-day (up to 2-week) supply of water, nonperishable food, and necessary medicines such as prescriptions, treatments, and oxygen.
- Do you have coolers and ice in case your medication needs to stay cold in a power outage?
- Be ready to go by keeping your car full of gas, tuned-up, and stocked with emergency supplies. Keep your wheelchair tuned-up, fully charged, and stocked with supplies.
- Locate and learn how to turn on and off utilities such as gas, water, and electricity. You may need to turn them off before evacuating.
- Keep all important documents in one place, for easy access.
- Keep an emergency "go bag".

### Checklist for your emergency "go bag"

- Important documents such as your home care plan; list of medications; medical records; physician, nurse, and family contacts; and Social Security, Medicaid, prescription, and insurance cards
- Medications and medical supplies
- Fully charged cell phone, charger, and car charger in case of power outage
- Several days' worth of cash (in case ATMs and credit cards aren't working)
- Flashlight and batteries
- First aid kit
- Extra eyeglasses
- Lighter or matches
- Blanket
- Manual can opener
- Food, water, clothing, and toiletries

#### Other possible emergency supplies

- Battery-powered radio/NOAA weather radio
- Lightweight backup oxygen system
- Cannula, tubing, gasket, charger, and batteries for an oxygen regulator
- Pulse oximeter
- Ventilator and/or CPAP supplies
- Hearing aid and batteries
- Assistive devices
- Supplies for your local area and weather such as a rain poncho, waders, boots, sun hat, or boat
- Flares or an emergency lantern

Taking time to do some emergency planning together can give you and your loved ones peace of mind now, and—potentially—better safety, independence, and comfort when the unexpected happens.

CARE CONNECTION

### Seniors and Dehydration: How to Stay Safe in the Heat

If you, or the people you love, are over the age of 65, it is extra important to stay cool and well hydrated when it is hot outside. A number of factors make seniors more vulnerable to heat and dehydration—some of them may surprise you.

**People over 65 are at higher risk of complications from the heat** because they are less likely to sense and respond to changes in temperature. Keep in mind that:

- Certain medications may cause mouth dryness, increase sensitivity to the sun, or impair the body's ability to regulate temperature and perspire.
- Some medical conditions may upset the body's normal response to heat, such as thyroid diseases, high blood pressure, heart and circulatory problems, cancer, and chronic illnesses like diabetes or lupus.
- Sun, heat, and humidity can trigger breathing problems for adults with respiratory conditions such as asthma and chronic obstructive pulmonary disease (COPD).
- When a senior is in danger and shows signs of dehydration, such as confusion, cognitive impairment, or fainting, their symptoms can be mistaken for other conditions.

### Hydrate, hydrate!

It is amazing how essential water is to all body processes, including temperature regulation. Just one cup of water an hour can help prevent dehydration, heat exhaustion, and potentially deadly heat stroke.

#### Overheated? Here's what to do.

If you suspect someone is starting to get overheated, take immediate steps to avoid or treat possible heat exhaustion. Move them to a cool environment, give them water to drink, and have them take a cool shower or sponge bath, loosen clothing, lay down, and slightly elevate the legs.

However, if the person is showing serious symptoms such as rapid and shallow breathing, confusion, fast pulse, or is unresponsive, they could have heat stroke, which is an emergency. Call 911 for immediate help and, if possible, move them into a cool area and cool the skin with water, damp sheets, or a fan.

With some extra care and precaution—and a cup of water an hour—you can help seniors stay safe in hot weather.

### **Keeping You Safe During COVID-19**

At BAYADA, our mission is to help people have a safe home life with comfort, independence, and dignity.

Below is helpful information about the coronavirus (COVID-19) and what BAYADA is doing to keep you safe:

- Wash your hands often with soap and water for at least 20 seconds.
- Cover your cough or sneeze with a tissue.
- Don't touch your eyes, nose, or mouth, especially with unwashed hands.
- Avoid close contact with individuals who are showing symptoms of illness.
- Clean and disinfect high-touch surfaces often.
- Stay home if you are sick.

#### **Symptoms of COVID-19**

There is a wide range of symptoms of COVID-19 reported, ranging from mild to severe:

- Fever or chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

### Steps BAYADA is taking to keep you safe:

- BAYADA's Infection Prevention Program provides the highest standards of infection prevention practices as recommended by the Centers for Disease Control and Prevention (CDC).
- Our employees are provided with personal protective equipment (PPE), such as surgical masks, when caring for any client, and additional PPE as appropriate.
- BAYADA employees are trained to recognize signs and symptoms of COVID-19, persons at risk, and measures to take when caring for clients with or exposed to COVID-19.
- Employees are self-screening for symptoms prior to the start of every client visit or shift.
- We encourage clients to notify their BAYADA office if they were exposed to someone with COVID-19.

If you have any additional questions, please contact your clinical manager.

### Champions Among Us | Legislators are People, too! Don't be Afraid to Ask for Help

When **Jennifer Fritz** received an invitation from BAYADA Director **Candice Proctor** to attend a legislative day last year in Harrisburg, PA, she admits she was a bit nervous at first.

The event brought together advocates from across Pennsylvania to educate legislators about home health care. Jennifer joined BAYADA employees and other clients in a meeting with Representative Barbara Gleim, who was willing to listen, and, even more importantly, to make time to help.

Jennifer, a BAYADA client who lives with paralysis due to an accident, spoke to Representative Gleim about the struggles she had obtaining medical supplies for her care and getting a contractor to make her shower more accessible. Since their meeting in Harrisburg last year, Representative Gleim has helped expedite access to supplies and home modifications. She even contacted Jennifer's insurance company to help her get the nursing care she needs.

"I was a little nervous to speak with Representative Gleim but she was really great, she really came through for me," Jennifer said. "If you are nervous about contacting your legislators, I say just do it because they are good people and they are there to help."

**Judy Banks**, the daughter of a BAYADA client who also attended the legislative day, couldn't agree more. "Legislators are there to represent our interests. While you may think they are scary, they are people just like you who may be experiencing similar problems with caring for an elderly or disabled family member," she said.

During the event, Judy expressed gratitude for the invaluable help she receives from the home health aides who care for her mother, who has Alzheimer's disease.

"I spoke to the legislators about getting better wages for home care workers, because it's a difficult job and an important job," said Judy, who also shared her frustration with completing the application for medical assistance. "There is so much paperwork required, and it may be difficult for some people to complete, which could deter them from applying. They need to streamline the process and make it easier."
